

# The Climate Sceptics Party

The world's first political party representing scepticism and objectivity in climate policy

## Letter to the Editor More on Climategate

January 2010

The Intergovernmental Panel on Climate Change (IPCC) has more egg on its face than Humpty Dumpty. Here is a list of some of the science manipulated by IPCC scientists around the world:

- Professor Michael Mann “bent the data” that showed a Mediaeval warm period before the 1450s: he made the warmer Mediaeval temperatures turn into a flat “hockey-stick” graph. His graph was used seven times by the IPCC. It is now regarded as fraudulent.
- IPCC scientist Professor Phil Jones suggested that Professor Keith Briffa’s temperature proxy data could have the lower recent temperatures dropped off the graph to “hide the decline”. The IPCC dropped the lower temperatures, and different (higher) temperatures were inserted and printed.
- New Zealand had its IPCC figures readjusted, so that instead of having flat temperatures, a “fudged” recent warming was published by the IPCC.
- Darwin (Australia) also had its flat temperatures “adjusted” by the IPCC to give the appearance of a recent rise in temperatures.
- Now we have computer programs in the National Climate Data Center (NCDC) in Asheville, North Carolina, and the NASA Goddard Institute for Space Studies (GISS) at Columbia University in New York City, showing that temperature data was “manipulated”.
- With press releases that use old “speculative” information written before 1999 to claim that Himalayan glaciers are in diabolical trouble, the IPCC is being exposed as a sham scientific organisation. More importantly, the hype about scary global warming is being revealed as nothing more than a con.
